

Texas Charter Solutions WebSmart Software with ICAP Records Management

Our Vergence process is a confluence of Finance/Student Software and the ICAP Archival processes. The two products complement each other through a seamless and intuitive design; this is “thinking outside the box” on steroids.

Imagine reviewing reports generated from your Software that will link to the electronically scanned hard-copy documents of that file.

- ✚ HR can approve a Teacher’s Contract with confidence by seeing the actual Criminal Background Check documents in a single and same query.
- ✚ Business Officials can review requisitions, checks, PO’s and receiving documents before certifying and submitting those reports to the board.
- ✚ Counselors creating TEA Reports can verify scores and other information in the Student Cumulative File and know they were accurate when submitted.

Made up of two standalone JR3 products (WebSmart and ICAP) both of which are TEA compliant, Vergence takes advantage of that association and provides a cost effective, new generation of transactional database software born in Texas and developed for Texas Schools.

By JR3 owning both the software code and the repository process, we offer a dynamic product that will pay dividends in productivity gains and ease of use while providing every option your present SIS software does plus some. A user friendly interface and staff support beyond the norm, you can make the upward shift without fear of unacceptable downtime or “staff revolt”.
